

Brad True is General Manager of Resource Development for Nucor Corporation. He led Nucor's pursuit for a long term supply of low-cost natural gas, resulting in two break-through deals with Encana Oil & Gas. As a business development executive at Nucor Corporation since 2004, Mr. True understands the perspective of large industrial consumers who need the security of a long term natural gas supply. Prior to his current focus on the oil and gas sector, Mr. True was instrumental in sourcing raw materials and developing production facilities for Nucor, with lead responsibility for developing greenfield raw material production facilities in both Trinidad and Louisiana.

Prior to joining Nucor, Mr. True held positions with SmartSignal, now a G.E. company; steelmaker ArcelorMittal; and Midrex, a direct reduction plant supplier. He is a graduate of Ga. Tech with a degree in mechanical engineering.
